# Amazon EC2 instance types

When you launch an EC2 instance, the *instance type* that you specify determines the hardware of the host computer used for your instance. Each instance type offers different compute, memory, and storage capabilities, and is grouped in an instance family based on these capabilities. Select an instance type based on the requirements of the application or software that you plan to run on your instance.

Amazon EC2 dedicates some resources of the host computer, such as CPU, memory, and instance storage, to a particular instance. Amazon EC2 shares other resources of the host computer, such as the network and the disk subsystem, among instances. If each instance on a host computer tries to use as much of one of these shared resources as possible, each receives an equal share of that resource. However, when a resource is underused, an instance can consume a higher share of that resource while it's available.

Each instance type provides higher or lower minimum performance from a shared resource. For example, instance types with high I/O performance have a larger allocation of shared resources. Allocating a larger share of shared resources also reduces the variance of I/O performance. For most applications, moderate I/O performance is more than enough. However, for applications that require greater or more consistent I/O performance, consider an instance type with higher I/O performance.

- **High-performance computing:** Hpc6a | Hpc6id | Hpc7a | Hpc7g

## Previous generation instances

Amazon Web Services offers previous generation instance types for users who have optimized their applications around them and have yet to upgrade. We encourage you to use current generation instance types to get the best performance, but we continue to support the following previous generation instance types. For more information about which current generation instance type would be a suitable upgrade, see [Previous Generation Instances](#).

- **General purpose:** A1 | M1 | M2 | M3 | M4 | T1
- **Compute optimized:** C1 | C3 | C4
- **Memory optimized:** R3 | R4
- **Storage optimized:** I2
- **Accelerated computing:** G3

## Instance performance

### Fixed performance instances

Fixed performance instances provide fixed CPU resources. These instances can deliver and sustain full CPU performance at any time, and for as long as a workload needs it. If you need consistently

high CPU performance for applications such as video encoding, high volume websites, or HPC applications, we recommend that you use fixed performance instances.

### Burstable performance instances

Burstable performance (T) instances provide a baseline level of CPU performance with the ability to burst above the baseline. The baseline CPU is designed to meet the needs of the majority of general purpose workloads, such as large-scale micro-services, web servers, small and medium databases, data logging, code repositories, virtual desktops, and development and test environments.

The baseline utilization and ability to burst are governed by CPU credits. Each burstable performance instance continuously earns credits when it stays below the CPU baseline, and continuously spends credits when it bursts above the baseline. For more information, see [Burstable performance instances](#) in the *Amazon EC2 User Guide for Linux Instances*.

### Flex instances

M7i-flex and C7i-flex instances offer a balance of compute, memory, and network resources, and they provide the most cost-effective way to run a broad spectrum of general purpose applications. These instances provide reliable CPU resources to deliver a baseline CPU performance of 40 percent, which is designed to meet the compute requirements for a majority of general purpose workloads. When more performance is needed, these instances provide the ability to exceed the baseline CPU performance and deliver up to 100 percent CPU performance for 95 percent of the time over a 24-hour window.

M7i-flex and C7i-flex instances running at a high CPU utilization that is consistently above the baseline for long periods of time might see a gradual reduction in the maximum burst CPU throughput. For more information, see [M7i-flex instances](#) and [C7i-flex instances](#).

# Amazon EC2 instance type naming conventions

Amazon EC2 provides a variety of instance types so you can choose the type that best meets your requirements. Instance types are named based on their family, generation, processor family, additional capabilities, and size. The first position of the instance type name indicates the instance family, for example c. The second position indicates the instance generation, for example 7. The third position indicates the processor family, for example g. The remaining letters before the period indicate additional capabilities, such as instance store volumes. After the period (.) is the instance size, such as small or 4xlarge, or metal for bare metal instances.

Instance families	Processor families	Additional capabilities
<ul style="list-style-type: none"><li>• <b>C</b> – Compute optimized</li><li>• <b>D</b> – Dense storage</li><li>• <b>F</b> – FPGA</li><li>• <b>G</b> – Graphics intensive</li></ul>	<ul style="list-style-type: none"><li>• <b>a</b> – AMD processors</li><li>• <b>g</b> – AWS Graviton processor</li><li>• <b>s</b></li><li>• <b>i</b> – Intel processors</li></ul>	<ul style="list-style-type: none"><li>• <b>b</b> – Block storage optimization</li><li>• <b>d</b> – Instance store volumes</li><li>• <b>e</b> – Extra storage or memory</li><li>• <b>flex</b> – Flex instance</li></ul>

# Amazon EC2 instance type specifications

Amazon EC2 provides a wide selection of instance types optimized to fit different use cases. Instance types comprise varying combinations of CPU, memory, storage, and networking capacity and give you the flexibility to choose the appropriate mix of resources for your applications. Each instance type includes one or more instance sizes, allowing you to scale your resources to the requirements of your target workload.

We group EC2 instance into the following categories:

- **General purpose** – Provide a balance of compute, memory, and networking resources. These instances are ideal for applications that use these resources in equal proportions, such as web servers and code repositories.  
  
**Burstable performance** – The T instance family is also referred to as burstable performance instances. These instances provide a baseline CPU performance with the ability to burst above the baseline at any time. For more information, see [Burstable performance instances](#) in the *Amazon EC2 User Guide for Linux Instances*.
- **Compute optimized** – Designed for compute intensive applications that benefit from high performance processors. These instances are ideal for batch processing workloads, media transcoding, high performance web servers, high performance computing (HPC), scientific modeling, dedicated gaming servers, ad server engines, and machine learning inference.
- **Memory optimized** – Designed to deliver fast performance for workloads that process large data sets in memory.
- **Storage optimized** – Designed for workloads that require high, sequential read and write access to very large data sets on local storage. They are optimized to deliver tens of thousands of low-latency, random I/O operations per second (IOPS) to applications.
- **Accelerated computing** – Use hardware accelerators, or co-processors, to perform functions, such as floating point number calculations, graphics processing, or data pattern matching, more efficiently than is possible in software running on CPUs.
- **High-performance computing** – Purpose built to offer the best price performance for running HPC workloads at scale on AWS. These instances are ideal for applications that benefit from high-performance processors, such as large, complex simulations and deep learning workloads.
- **Previous generation** – AWS offers previous generation instance types for users who have optimized their applications around them and have yet to upgrade. We encourage you to use

current generation instance types to get the best performance, but we continue to support previous generation instance types.

To determine which instance types meet your requirements, such as supported Regions, compute resources, or storage resources, see [Find an Amazon EC2 instance type](#).

**Note**

<sup>1</sup> These instances have a baseline bandwidth and can use a network I/O credit mechanism to burst beyond their baseline bandwidth on a best effort basis. Other instances types can sustain their maximum performance indefinitely. For more information, see [instance network bandwidth](#).

For 32xlarge and metal instance types that support 200 Gbps, at least 2 ENIs, each attached to a different network card, are required on the instance to achieve 200 Gbps throughput. Each ENI attached to a network card can achieve a max of 170 Gbps.

**Note**

<sup>1</sup> These instances can support maximum performance for 30 minutes at least once every 24 hours, after which they revert to their baseline performance. Other instances can sustain the maximum performance indefinitely. If your workload requires sustained maximum performance for longer than 30 minutes, use one of these instances.

<sup>2</sup> default indicates that instances are enabled for EBS optimization by default. supported indicates that instances can optionally be enabled for EBS optimization For more information, see [Amazon EBS-optimized instances](#).

## Compute optimized instances

Compute optimized instances are designed for compute intensive applications that benefit from high performance processors. These instances are ideal for batch processing workloads, media transcoding, high performance web servers, high performance computing (HPC), scientific modeling, dedicated gaming servers, ad server engines, and machine learning inference.

For information on previous generation instance types of this category, see [Previous generation instances](#).

#### Note

<sup>1</sup> These instances have a baseline bandwidth and can use a network I/O credit mechanism to burst beyond their baseline bandwidth on a best effort basis. Other instances types can sustain their maximum performance indefinitely. For more information, see [instance network bandwidth](#).

For 32xlarge and metal instance types that support 200 Gbps, at least 2 ENIs, each attached to a different network card, are required on the instance to achieve 200 Gbps throughput. Each ENI attached to a network card can achieve a max of 170 Gbps.

**Note**

<sup>1</sup> These instances can support maximum performance for 30 minutes at least once every 24 hours, after which they revert to their baseline performance. Other instances can sustain the maximum performance indefinitely. If your workload requires sustained maximum performance for longer than 30 minutes, use one of these instances.

<sup>2</sup> default indicates that instances are enabled for EBS optimization by default. supported indicates that instances can optionally be enabled for EBS optimization. For more information, see [Amazon EBS-optimized instances](#).

# Memory optimized instances

Memory optimized instances are designed to deliver fast performance for workloads that process large data sets in memory.

For information on previous generation instance types of this category, see [Previous generation instances](#).

### Note

<sup>1</sup> These instances have a baseline bandwidth and can use a network I/O credit mechanism to burst beyond their baseline bandwidth on a best effort basis. Other instances types can sustain their maximum performance indefinitely. For more information, see [instance network bandwidth](#).

For 32xlarge and metal instance types that support 200 Gbps, at least 2 ENIs, each attached to a different network card, are required on the instance to achieve 200 Gbps throughput. Each ENI attached to a network card can achieve a max of 170 Gbps.

u-6tb1.metal, u-9tb1.metal, and u-12tb1.metal instances launched after March 12, 2020 provide network performance of 100 Gbps. u-6tb1.metal, u-9tb1.metal, and u-12tb1.metal instances launched before March 12, 2020 might only provide network performance of 25 Gbps. To ensure that instances launched before March 12, 2020 have a network performance of 100 Gbps, contact your account team to upgrade your instance at no additional cost.

**Note**

<sup>1</sup> These instances can support maximum performance for 30 minutes at least once every 24 hours, after which they revert to their baseline performance. Other instances can sustain the maximum performance indefinitely. If your workload requires sustained maximum performance for longer than 30 minutes, use one of these instances.

<sup>2</sup> default indicates that instances are enabled for EBS optimization by default.  
supported indicates that instances can optionally be enabled for EBS optimization For more information, see [Amazon EBS-optimized instances](#).

## Storage optimized instances

Storage optimized instances are designed for workloads that require high, sequential read and write access to very large data sets on local storage. They are optimized to deliver tens of thousands of low-latency, random I/O operations per second (IOPS) to applications.

For information on previous generation instance types of this category, see [Previous generation instances](#).

**Note**

<sup>1</sup> These instances have a baseline bandwidth and can use a network I/O credit mechanism to burst beyond their baseline bandwidth on a best effort basis. Other instances types can sustain their maximum performance indefinitely. For more information, see [instance network bandwidth](#).

<sup>2</sup> These instances support enhanced networking using the Intel 82599 VF interface.

 **Note**

<sup>1</sup> These instances can support maximum performance for 30 minutes at least once every 24 hours, after which they revert to their baseline performance. Other instances can sustain the maximum performance indefinitely. If your workload requires sustained maximum performance for longer than 30 minutes, use one of these instances.

<sup>2</sup> default indicates that instances are enabled for EBS optimization by default. supported indicates that instances can optionally be enabled for EBS optimization For more information, see [Amazon EBS-optimized instances](#).

## Accelerated computing instances

Accelerated computing instances use hardware accelerators, or co-processors, to perform functions, such as floating point number calculations, graphics processing, or data pattern matching, more efficiently than is possible in software running on CPUs.

For information on previous generation instance types of this category, see [Previous generation instances](#).

**Note**

<sup>1</sup> These instances have a baseline bandwidth and can use a network I/O credit mechanism to burst beyond their baseline bandwidth on a best effort basis. Other instances types can sustain their maximum performance indefinitely. For more information, see [instance network bandwidth](#).

**Note**

<sup>1</sup> These instances can support maximum performance for 30 minutes at least once every 24 hours, after which they revert to their baseline performance. Other instances can sustain the maximum performance indefinitely. If your workload requires sustained maximum performance for longer than 30 minutes, use one of these instances.

<sup>2</sup> default indicates that instances are enabled for EBS optimization by default.  
supported indicates that instances can optionally be enabled for EBS optimization For more information, see [Amazon EBS-optimized instances](#).

## High-performance computing instances

High-performance computing instances are purpose built to offer the best price performance for running HPC workloads at scale on AWS. These instances are ideal for applications that benefit from high-performance processors, such as large, complex simulations and deep learning workloads.

**Note**

<sup>1</sup> These instances have a baseline bandwidth and can use a network I/O credit mechanism to burst beyond their baseline bandwidth on a best effort basis. Other instances types can sustain their maximum performance indefinitely. For more information, see [instance network bandwidth](#).

<sup>2</sup> These instances support enhanced networking using the Intel 82599 VF interface.

**Note**

<sup>1</sup> These instances can support maximum performance for 30 minutes at least once every 24 hours, after which they revert to their baseline performance. Other instances can sustain the maximum performance indefinitely. If your workload requires sustained maximum performance for longer than 30 minutes, use one of these instances.

<sup>2</sup> default indicates that instances are enabled for EBS optimization by default.  
supported indicates that instances can optionally be enabled for EBS optimization For more information, see [Amazon EBS-optimized instances](#).

# Amazon EC2 instance types by Region

An Amazon EC2 instance is tied to the zone in which it was launched. The ID of an instance is tied to the Region for the instance, and can only be used in this Region.

When you create your AWS account, we set default quotas on these resources on a per-Region basis. We monitor your usage within each Region and raise your quotas automatically based on your use of Amazon EC2. For more information, see [Quotas](#).

Each Region supports a subset of the available instance types.

## South America (São Paulo) — sa-east-1

The following instance types are available in South America (São Paulo).

- **General Purpose:** M1 | M2 | M3 | M4 | M5 | M5a | M5ad | M5d | M5zn | M6a | M6g | M6gd | M6i | M6id | M7g | M7gd | M7i | M7i-flex | T1 | T2 | T3 | T3a | T4g
- **Compute Optimized:** C1 | C3 | C4 | C5 | C5a | C5ad | C5d | C5n | C6a | C6g | C6gd | C6gn | C6i | C6in | C7i | C7i-flex
- **Memory Optimized:** R3 | R4 | R5 | R5a | R5ad | R5b | R5d | R5n | R6g | R6gd | R6i | R7i | U-3tb1 | U-6tb1 | U-12tb1 | X1 | X2idn | X2iedn | X1e
- **Storage Optimized:** I3 | I3en | I4i
- **Accelerated Computing:** G4dn | G5 | Inf1 | Inf2
- **Previous Generation:** C1 | C3 | C4 | M1 | M2 | M3 | M4 | R3 | R4 | T1

## AWS GovCloud (US-East) — us-gov-east-1

The following instance types are available in AWS GovCloud (US-East).

- **General Purpose:** M5 | M5a | M5d | M5dn | M5n | M6g | M6gd | M6i | T3 | T3a | T4g
- **Compute Optimized:** C5 | C5a | C5d | C5n | C6g | C6gd | C6gn | C6i | C6in
- **Memory Optimized:** R5 | R5a | R5d | R5dn | R5n | R6g | R6gd | R6i | R7i | U-6tb1 | U-9tb1 | U-24tb1 | X1 | X2idn | X2iedn
- **Storage Optimized:** I3 | I3en | I4i
- **Accelerated Computing:** G4dn | Inf1 | P3dn

## AWS GovCloud (US-West) — us-gov-west-1

The following instance types are available in AWS GovCloud (US-West).

- **General Purpose:** M5 | M5a | M5ad | M5d | M5dn | M5n | M6g | M6gd | M6i | M6id | M6idn | M6in | T2 | T3 | T3a | T4g
- **Compute Optimized:** C5 | C5a | C5d | C5n | C6g | C6gd | C6gn | C6i | C6id | C6in
- **Memory Optimized:** R5 | R5a | R5ad | R5d | R5dn | R5n | R6g | R6gd | R6i | R6id | R6idn | R6in | R7i | U-3tb1 | U-6tb1 | U-9tb1 | U-12tb1 | U-24tb1 | X1 | X1e | X2idn | X2iedn

- **Storage Optimized:** D3 | I3 | I3en | I4i
- **Accelerated Computing:** F1 | G4dn | Inf1 | P2 | P3 | P3dn | P4d
- **High Performance Computing:** Hpc6a | Hpc6id | Hpc7a | Hpc7g
- **Previous Generation:** C4 | G3 | M4 | R4

# Instances built on the AWS Nitro System

The Nitro System is a collection of hardware and software components built by AWS that enable high performance, high availability, and high security. For more information, see [AWS Nitro System](#).

The Nitro System provides bare metal capabilities that eliminate virtualization overhead and support workloads that require full access to host hardware. Bare metal instances are well suited for the following:

- Workloads that require access to low-level hardware features (for example, Intel VT) that are not available or fully supported in virtualized environments
- Applications that require a non-virtualized environment for licensing or support

## Nitro components

The following components are part of the Nitro System:

- Nitro card
  - Local NVMe storage volumes
  - Networking hardware support
  - Management
  - Monitoring
  - Security
- Nitro security chip, integrated into the motherboard
- Nitro hypervisor - A lightweight hypervisor that manages memory and CPU allocation and delivers performance that is indistinguishable from bare metal for most workloads.

## Virtualized instances

The following virtualized instances are built on the Nitro System:

- **General purpose:** M5 | M5a | M5ad | M5d | M5dn | M5n | M5zn | M6a | M6g | M6gd | M6i | M6id | M6idn | M6in | M7a | M7g | M7gd | M7i | M7i-flex | T3 | T3a | T4g
- **Compute optimized:** C5 | C5a | C5ad | C5d | C5n | C6a | C6g | C6gd | C6gn | C6i | C6id | C6in | C7a | C7g | C7gd | C7gn | C7i | C7i-flex

- **Memory optimized:** R5 | R5a | R5ad | R5b | R5d | R5dn | R5n | R6a | R6g | R6gd | R6i | R6idn | R6in | R6id | R7a | R7g | R7gd | R7i | R7iz | U-3tb1 | U-6tb1 | U-9tb1 | U-12tb1 | U-18tb1 | U-24tb1 | U7i-12tb | U7in-16tb | U7in-24tb | U7in-32tb | X2gd | X2idn | X2iedn | X2iezn | z1d
- **Storage optimized:** D3 | D3en | I3en | I4g | I4i | I4gn | I4gen
- **Accelerated computing:** DL1 | DL2q | G4ad | G4dn | G5 | G5g | G6 | Gr6 | Inf1 | Inf2 | P3dn | P4d | P4de | P5 | Trn1 | Trn1n | VT1
- **High-performance computing:** Hpc6a | Hpc6id | Hpc7a | Hpc7g
- **Previous generation:** A1

## Bare metal instances

The following bare metal instances are built on the Nitro System:

- **General purpose:** m5.metal | m5d.metal | m5dn.metal | m5n.metal | m5zn.metal | m6a.metal | m6g.metal | m6gd.metal | m6i.metal | m6id.metal | m6idn.metal | m6in.metal | m7a.metal-48x1 | m7g.metal | m7gd.metal | m7i.metal-24x1 | m7i.metal-48x1 | mac1.metal | mac2.metal | mac2-m2.metal | mac2-m2pro.metal
- **Compute optimized:** c5.metal | c5d.metal | c5n.metal | c6a.metal | c6g.metal | c6gd.metal | c6i.metal | c6id.metal | c6in.metal | c7a.metal-48x1 | c7g.metal | c7gd.metal | c7gn.metal | c7i.metal-24x1 | c7i.metal-48x1
- **Memory optimized:** r5.metal | r5b.metal | r5d.metal | r5dn.metal | r5n.metal | r6a.metal | r6g.metal | r6gd.metal | r6i.metal | r6idn.metal | r6in.metal | r6id.metal | r7a.metal-48x1 | r7g.metal | r7gd.metal | r7i.metal-24x1 | r7i.metal-48x1 | r7iz.metal-16x1 | r7iz.metal-32x1 | u-6tb1.metal | u-9tb1.metal | u-12tb1.metal | u-18tb1.metal | u-24tb1.metal | x2gd.metal | x2idn.metal | x2iedn.metal | x2iezn.metal | z1d.metal
- **Storage optimized:** i3.metal | i3en.metal | i4i.metal
- **Accelerated computing:** g4dn.metal | g5g.metal
- **Previous generation:** a1.metal

Launching a bare metal instance boots the underlying server, which includes verifying all hardware and firmware components. This means that it can take 20 minutes from the time the instance enters the running state until it becomes available over the network.

# Requirements

- Instances built on the Nitro System have the following driver requirements:
  - [NVMe](#) drivers must be installed
  - [Elastic Network Adapter \(ENA\)](#) drivers must be installed

The current AWS Windows AMIs meet these requirements and the following Linux AMIs meet these requirements:

- AL2023
- Amazon Linux 2
- Ubuntu 14.04 or later with the `linux-aws` kernel
- Red Hat Enterprise Linux 7.4 or later
- SUSE Linux Enterprise Server 12 SP2 or later
- CentOS 7.4.1708 or later
- FreeBSD 11.1 or later
- Debian GNU/Linux 9 or later
- Instances with AWS Graviton processors have the following requirements:
  - An AMI for the 64-bit Arm architecture
  - Support for booting through UEFI with ACPI tables and ACPI hot-plug of PCI devices

The following AMIs meet these requirements:

- Amazon Linux 2 (64-bit Arm)
- Ubuntu 16.04 or later (64-bit Arm) with the `linux-aws` kernel
- Red Hat Enterprise Linux 8.0 or later (64-bit Arm)
- SUSE Linux Enterprise Server 15 or later (64-bit Arm)
- Debian 10 or later (64-bit Arm)

# Amazon EC2 instance type quotas

The following quotas apply to Amazon EC2 instances by default.

## Quotas

- [On-Demand Instance quotas](#)
- [Spot Instance quotas](#)
- [Dedicated Host quotas](#)

## On-Demand Instance quotas

The following table shows the maximum number of vCPUs that you can provision for On-Demand Instances per instance type. For more information, see [On-Demand Instance quotas](#) in the *Amazon EC2 User Guide*.

Name	Default	Adjustable
Running On-Demand DL instances	0	<a href="#">Yes</a>
Running On-Demand F instances	0	<a href="#">Yes</a>
Running On-Demand G and VT instances	0	<a href="#">Yes</a>
Running On-Demand HPC instances	0	<a href="#">Yes</a>
Running On-Demand High Memory instances	0	<a href="#">Yes</a>
Running On-Demand Inf instances	0	<a href="#">Yes</a>
Running On-Demand P instances	0	<a href="#">Yes</a>
Running On-Demand Standard (A, C, D, H, I, M, R, T, Z) instances	5	<a href="#">Yes</a>
Running On-Demand Trn instances	0	<a href="#">Yes</a>
Running On-Demand X instances	0	<a href="#">Yes</a>

## Spot Instance quotas

The following table shows the maximum number of vCPUs that you can provision for Spot Instances per instance type. For more information, see [Spot Instance quotas](#) in the *Amazon EC2 User Guide*.

Name	Default	Adjustable
All DL Spot Instance Requests	0	<a href="#">Yes</a>
All F Spot Instance Requests	0	<a href="#">Yes</a>
All G and VT Spot Instance Requests	0	<a href="#">Yes</a>
All Inf Spot Instance Requests	0	<a href="#">Yes</a>
All P4, P3 and P2 Spot Instance Requests	0	<a href="#">Yes</a>
All P5 Spot Instance Requests	0	<a href="#">Yes</a>
All Standard (A, C, D, H, I, M, R, T, Z) Spot Instance Requests	5	<a href="#">Yes</a>
All Trn Spot Instance Requests	0	<a href="#">Yes</a>
All X Spot Instance Requests	0	<a href="#">Yes</a>

## Dedicated Host quotas

The following table shows the maximum number of running Dedicated Hosts that you can allocate per instance type.

Name	Default	Adjustable
Running Dedicated a1 Hosts	0	<a href="#">Yes</a>
Running Dedicated c3 Hosts	0	<a href="#">Yes</a>
Running Dedicated c4 Hosts	0	<a href="#">Yes</a>

# Document history for the Amazon EC2 Instance Types Guide

The following table describes the instance type releases for Amazon EC2.

Change	Description	Date
<a href="#">U7i-12tb, U7in-16tb, U7in-24tb, and U7in-32tb instances</a>	New high memory instance types that feature 4th generation Intel Xeon Scalable processors.	May 28, 2024
<a href="#">C7i-flex instances</a>	New compute optimized instances featuring Intel Xeon Scalable processors (Sapphire Rapids). They deliver a baseline CPU performance of 40 percent with the ability to deliver up to 100 percent CPU performance for 95 percent of the time over a 24-hour period.	May 14, 2024
<a href="#">g6 and gr6 instances</a>	New high performance GPU-based instance types for deep learning inference and graphics-intensive applications.	April 4, 2024
<a href="#">C7gn bare metal instances</a>	New c7gn.metal bare metal instance type powered by the latest generation AWS Graviton3E processors and the new AWS Nitro cards.	March 26, 2024

<a href="#">C7gd, M7gd, and R7gd bare metal instances</a>	New bare metal instances.	March 6, 2024
<a href="#">DL2q instances</a>	New instances that use Qualcomm AI100 inference accelerators, which feature 7th generation Qualcomm Edge AI cores. These instances can be used to cost-efficiently deploy deep learning (DL) workloads in the cloud or validate performance and accuracy of DL workloads that will be deployed on Qualcomm edge devices.	November 15, 2023
<a href="#">Mac2-m2 instances</a>	New general purpose instance type that features Apple M2 processors.	October 25, 2023
<a href="#">R7i instances</a>	New memory optimized instance types that feature 4th generation Intel Xeon Scalable processors.	October 16, 2023
<a href="#">C7a instances</a>	New compute optimized instances powered by 4th generation AMD EPYC processors.	October 4, 2023
<a href="#">Mac2-m2pro instances</a>	New general purpose instance type that features Apple M2 Pro processors.	September 18, 2023
<a href="#">C7i instances</a>	New compute optimized instance types that feature 4th generation Intel Xeon Scalable processors.	September 14, 2023

<a href="#">R7a instances</a>	New memory optimized instance types featuring 4th generation AMD EPYC 9R14 processors and up to 1536 GiB of system memory.	September 11, 2023
<a href="#">R7iz instances</a>	New high-frequency and high memory instances powered by 4th generation Intel Xeon processors.	September 7, 2023
<a href="#">Hpc7a instances</a>	New compute optimized instance types that feature 4th generation AMD EPYC processors. These instances support up to 300 Gbps networking bandwidth, and up to 192 CPU cores with up to 768 GB of system memory.	August 17, 2023
<a href="#">M7a instances</a>	New general purpose instances powered by 4th generation AMD EPYC processors.	August 15, 2023
<a href="#">M7i-flex instances</a>	New general purpose instances that offer a balance of compute, memory, and network resources for a broad spectrum of general purpose applications. They deliver a baseline CPU performance of 40 percent with the ability to deliver up to 100 percent CPU performance for 95 percent of the time over a 24-hour period.	August 2, 2023

<a href="#">M7i instances</a>	New general purpose instance types that feature 4th generation Intel Xeon Scalable processors.	August 2, 2023
<a href="#">R7gd instances</a>	New memory optimized instances featuring the latest AWS Graviton3 processors.	July 28, 2023
<a href="#">M7gd instances</a>	New general purpose instances featuring the latest AWS Graviton3 processors.	July 28, 2023
<a href="#">C7gd instances</a>	New compute optimized instances featuring the latest AWS Graviton3 processors.	July 28, 2023
<a href="#">P5 instances</a>	New accelerated computing instances that feature 8 NVIDIA H100 GPUs with 640 GB high-bandwidth GPU memory, 3rd generation AMD EPYC processors, and 2 TB system memory.	July 26, 2023
<a href="#">Hpc7g instances</a>	New high-performance computing instances powered by AWS Graviton3E processors that provide up to 35 percent higher vector-instruction processing performance than Graviton3 processors.	June 20, 2023

<a href="#">C7gn instances</a>	New compute optimized instances powered by the latest generation AWS Graviton3E processors and the new AWS Nitro cards. These instances offer up to 200 Gbps network bandwidth.	June 20, 2023
<a href="#">I4g instances</a>	New storage optimized instances that features the AWS Graviton2 processor and AWS Nitro SSDs.	May 9, 2023
<a href="#">Trn1n instances</a>	New accelerated computing instances optimized for machine learning training powered by AWS Trainium accelerators.	April 13, 2023
<a href="#">Inf2 instances</a>	New instances featuring AWS Inferentia2 accelerators, the latest machine learning chip designed by AWS.	April 13, 2023
<a href="#">Hpc6id instance</a>	New memory optimized instance featuring 3rd generation Intel Xeon Scalable processors (Ice Lake).	November 29, 2022
<a href="#">R6in and R6idn instances</a>	New memory optimized instances for network-intensive workloads.	November 28, 2022
<a href="#">M6in and M6idn instances</a>	New general computing instances types.	November 28, 2022

<a href="#">C6in instances</a>	New compute optimized instances ideal for running high performance computing.	November 28, 2022
<a href="#">Trn1 instances</a>	New accelerated computing instances optimized for deep learning powered by AWS Trainium chips.	October 10, 2022
<a href="#">R6a instances</a>	New memory optimized instances featuring 3rd generation AMD EPYC processors.	July 19, 2022
<a href="#">R6id instances</a>	New memory optimized instances featuring 3rd generation Intel Xeon Scalable processors (Ice Lake).	June 9, 2022
<a href="#">M6id instances</a>	New general purpose instances featuring 3rd generation Intel Xeon Scalable processors (Ice Lake).	May 26, 2022
<a href="#">C6id instances</a>	New compute optimized instances featuring 3rd generation Intel Xeon Scalable processors (Ice Lake).	May 26, 2022
<a href="#">C7g instances</a>	New compute optimized instances featuring AWS Graviton3 processors.	May 23, 2022
<a href="#">I4i instances</a>	New storage optimized instances featuring 3rd generation Intel Xeon Scalable processors (Ice Lake).	April 27, 2022

<a href="#">X2idn and X2iedn instances</a>	New memory optimized instances featuring Intel Xeon Scalable processors (Ice Lake).	March 10, 2022
<a href="#">C6a instances</a>	New compute optimized instances featuring 3rd generation AMD EPYC processors (Milan).	February 14, 2022
<a href="#">X2iezn instances</a>	New memory optimized instances featuring Intel Xeon Platinum processors (Cascade Lake).	January 26, 2022
<a href="#">Hpc6a instances</a>	New compute optimized instances featuring AMD EPYC processors.	January 10, 2022
<a href="#">Im4gn and Is4gen instances</a>	New storage optimized instances.	November 30, 2021
<a href="#">M6a instances</a>	New general purpose instances powered by AMD 3rd Generation EPYC processors.	November 29, 2021
<a href="#">G5g instances</a>	New accelerated computing instances featuring AWS Graviton2 processors based on 64-bit Arm architecture.	November 29, 2021
<a href="#">R6i instances</a>	New memory optimized instances.	November 22, 2021

<a href="#">G5 instances</a>	New accelerated computing instances featuring up to 8 NVIDIA A10G GPUs and second generation AMD EPY processors.	November 11, 2021
<a href="#">C6i instances</a>	New compute optimized instances featuring Intel Xeon Scalable processors (Ice Lake).	October 28, 2021
<a href="#">DL1 instances</a>	New accelerated computing instances featuring Habana Gaudi accelerators and Intel Xeon Platinum processors (Cascade Lake).	October 26, 2021
<a href="#">VT1 instances</a>	New accelerated computing instances that use Xilinx Alveo U30 media accelerators and are designed for live video transcoding workloads.	September 13, 2021
<a href="#">M6i instances</a>	New general purpose instances featuring third generation Intel Xeon Scalable processors (Ice Lake).	August 16, 2021
<a href="#">High memory virtualized instances</a>	Virtualized high memory instances purpose-built to run large in-memory databases. The new types are u-6tb1.56xlarge, u-6tb1.112xlarge, u-9tb1.112xlarge, and u-12tb1.112xlarge.	May 11, 2021

<a href="#">X2gd instances</a>	New memory optimized instances featuring an AWS Graviton2 processor based on 64-bit Arm architecture.	March 16, 2021
<a href="#">C6gn instances</a>	New computed optimized instances featuring an AWS Graviton2 processor based on 64-bit Arm architecture. These instances can utilize up to 100 Gbps of network bandwidth.	December 18, 2020
<a href="#">G4ad instances</a>	New instances powered by AMD Radeon Pro V520 GPUs and AMD 2nd Generation EPYC processors.	December 9, 2020
<a href="#">D3, D3en, M5zn, and R5b instances</a>	New instance types built on the Nitro System.	December 1, 2020
<a href="#">Mac1 instances</a>	New instances built on Apple Mac mini computers that support running macOS workloads on Amazon EC2.	November 30, 2020
<a href="#">P4d instances</a>	New accelerated computing instances that provide a high-performance platform for machine learning and HPC workloads.	November 2, 2020

<a href="#">T4g instances</a>	New general purpose instances powered by AWS Graviton2 processors, which are based on 64-bit Arm Neoverse cores and custom silicon designed by AWS for optimized performance and cost.	September 14, 2020
<a href="#">C5ad instances</a>	New compute optimized instances featuring second-generation AMD EPYC processors.	August 13, 2020
<a href="#">C6gd, M6gd, and R6gd instances</a>	New general purpose instances powered by AWS Graviton2 processors, which are based on 64-bit Arm Neoverse cores and custom silicon designed by AWS for optimized performance and cost.	July 27, 2020
<a href="#">C6g and R6g instances</a>	New general purpose instances powered by AWS Graviton2 processors, which are based on 64-bit Arm Neoverse cores and custom silicon designed by AWS for optimized performance and cost.	June 10, 2020
<a href="#">C5a instances</a>	New compute optimized instances featuring second-generation AMD EPYC processors.	June 4, 2020

<a href="#">M6g instances</a>	New general purpose instances powered by AWS Graviton2 processors, which are based on 64-bit Arm Neoverse cores and custom silicon designed by AWS for optimized performance and cost.	May 11, 2020
<a href="#">Inf1 instances</a>	New instances featuring AWS Inferentia, a machine learning inference chip designed to deliver high performance at a low cost.	December 3, 2019
<a href="#">G4dn instances</a>	New instances featuring NVIDIA Tesla GPUs.	September 19, 2019
<a href="#">I3en instances</a>	New I3en instances can utilize up to 100 Gbps of network bandwidth.	May 8, 2019
<a href="#">T3a instances</a>	New instances featuring AMD EPYC processors.	April 24, 2019
<a href="#">M5ad and R5ad instances</a>	New instances featuring AMD EPYC processors.	March 27, 2019
<a href="#">p3dn.24xlarge instances</a>	New instances that provide 100 Gbps of network bandwidth.	December 7, 2018
<a href="#">C5n instances</a>	New instances that provide up to 100 Gbps of network bandwidth.	November 26, 2018
<a href="#">A1 instances</a>	New instances featuring Arm-based processors.	November 26, 2018

<a href="#">R5a instances</a>	New instances featuring AMD EPYC processors.	November 6, 2018
<a href="#">M5a instances</a>	New instances featuring AMD EPYC processors.	November 6, 2018
<a href="#">T3 instances</a>	New instances featuring AMD EPYC processors.	August 21, 2018
<a href="#">z1d instances</a>	New memory optimized instances.	July 25, 2018
<a href="#">R5 and R5d instances</a>	New memory optimized instances.	July 25, 2018
<a href="#">X1e instances</a>	New memory optimized instances.	November 28, 2017
<a href="#">M5 instances</a>	New general purpose instances.	November 28, 2017
<a href="#">H1 instances</a>	New storage optimized instances.	November 28, 2017
<a href="#">C5 instances</a>	New compute optimized instances.	November 6, 2017
<a href="#">P3 instances</a>	New accelerated computing instances.	October 25, 2017
<a href="#">G3 instances</a>	New accelerated computing instances.	July 13, 2017
<a href="#">F1 instances</a>	New accelerated computing instances.	April 19, 2017
<a href="#">I3 instances</a>	New storage optimized instances.	February 23, 2017

<a href="#">R4 instances</a>	New memory optimized instances.	November 30, 2016
<a href="#">P2 instances</a>	New accelerated computing instances.	September 29, 2016
<a href="#">X1 instances</a>	New memory optimized instances.	May 18, 2016
<a href="#">M4 instances</a>	New general purpose instances.	June 11, 2015
<a href="#">D2 instances</a>	New storage optimized instances.	March 24, 2015
<a href="#">C4 instances</a>	New compute optimized instances.	January 11, 2015
<a href="#">T2 instances</a>	New general purpose instances.	June 30, 2014
